

ROCKS AND HARD PLACES

Pictured at the QuarryNZ conference in Auckland are WorkSafe's Mark Pizey and Wayne Scott, new chief executive of Minex, the mining and quarry industry national health and safety council. Scott told the conference Minex is developing guidance material to help small quarry operators pass the oral exam for the Certificate of Competence, and is also recruiting a nationwide team of experienced operators to act as mentors. Pizey told delegates that the extractives industry has been asked for feedback on proposed changes to the CoC process.

AND THE WINNER IS ...

Our cheeky competition to find a snappy brand name for the new 'health and safety performance improvement toolkit' – its rather prosaic internal working title – drew nearly 30 entries.

Formerly known as Safety Star Rating, the first part of the toolkit is due to be launched in September.

Some of our favourite suggestions included:

- SafeSteer
- HSC (Health & Safety Checkup)
- ORBIT (Overall Risk Barrier Improvement Toolkit)
- CLEAR Framework (Comprehensive Leadership Engagement and Risk Framework).

But in the end we plumped for DSO – Driving Safer Outcomes – suggested by Peter Symington of Wellington, which we thought best captured the intent of the toolkit. He is now the proud owner of a Safeguard t-shirt.

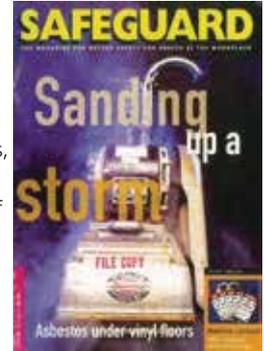

There were a few tongue-in-cheek suggestions, including ESKI (Everyone's Safety Kit Included), SHEEP (Safety & Health Evaluation for Excellent Programme), and the Safety & Health Improvement Toolkit Evaluation, which at least makes for a memorable acronym.

So there. We've done our bit. Now we just have to sit back and see what the marketing gurus actually come up with when the toolkit is launched in September.

HISTORY NEVER REPEATS

**AN EXTRACT FROM SAFEGUARD
20 YEARS AGO**

JULY/AUG 1997 – ISSUE 44

Safety is about people. Safety is about people, having been given the right tools, wanting to achieve something special by creating a culture where the wellbeing of individuals is important. Safety is about people believing that you want them to achieve this something special. It is about whether you and all staff not only speak, but believe and act, in a manner that demonstrates safety is an integral part of everyday business and, indeed, of everyday life. Because if they do not, then all the effort and money spent on procedures, rules, specifications and safety devices will yield only mediocre results.
